

480206 #2

The problem:

Modern Muzzleloaders are accurate to distances beyond the ability of many hunters to use open sights. Optical sights are used successfully in many other states during Muzzleloader season. Optical sights result in more accurate shot placement, thus wounding fewer deer.

**BE IT RESOLVED** the Conservation Congress at its annual meeting held in Pierce County on April 10, 2006, recommends that the Department of Natural Resources take action to correct this situation by introducing rule changes allowing **OPTICAL MAGNIFICATION SIGHTS** on Muzzleloaders during the special Muzzleloader season.
